

G.AutoReel

Compact Fall Arrester

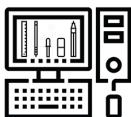

Our G.AutoReel fall arrester is a compact and safe alternative to using a shock absorbing lanyard. Supplied completely with karabiner, enabling a quick and secure attachment.

The G.AutoReel fall arrester keeps the webbing lifeline taught against the user, eliminating the potential for slack webbing, reducing the free fall distance. The quick acting locking mechanism results in lower forces being exerted onto the user's during a fall, therefore reducing the chance of injury. The impact absorbing casing provides excellent protection with high durability. The unit features a shock absorbing element.

The G.AutoReel fall arrester weighs just 1.25kg, complete with karabiner, making it both a safe and lightweight solution for working at height.

Features:

- ✓ Shock absorber
- ✓ Extended length: 2.5m
- ✓ 140kg safe working load
- ✓ Weight: 1.25kg (inc. karabiners)
- ✓ Supplied complete with karabiner
- ✓ Quick-acting locking mechanism
- ✓ Safe alternative to a shock absorbing lanyard
- ✓ CE certified, fully tested to European standards. Conforms to EN360
